PROFESSIONAL SUMMARY

Highly skilled and results-oriented Software Developer with a strong foundation in full-stack development, specializing in building scalable, production-grade applications. Proven expertise in Python, JavaScript, React, Node.js, and C++, complemented by experience in LLM integration and prompt engineering. Adept at optimizing system performance, designing robust architectures, and ensuring data integrity, with a keen eye for code quality and debugging. Eager to leverage strong problem-solving abilities and competitive programming background to contribute to Turing's mission of advancing AI-driven coding solutions and evaluating AI-generated code for efficiency, scalability, and reliability.

SKILLS

Programming Languages: Python, JavaScript, TypeScript, C++, Go (familiarity), Rust (familiarity)

Frameworks & Libraries: React, Next.js, Node.js, Express.js, FastAPI

AI & Machine Learning: LLM Integration, Prompt Engineering, Semantic Search, Pinecone

Databases & ORMs: PostgreSQL, Redis, ClickHouse, Prisma, Drizzle

DevOps & Cloud: Docker, AWS (EC2, S3, Lambda), Nginx, Linux, Git, CI/CD

EXPERIENCE

Software Developer Intern at klimb.io

Nov 2025 – Current • Nagpur, Maharashtra

- Redesigned platform access control by migrating from feature flags to a credit-based usage system using PostgreSQL and middleware guards, enabling monetization of 6+ AI features and cutting complexity by ~70%.
- Implemented a global field template architecture by restructuring the database schema and backfilling data, replacing per-tenant field duplication with a shared model, achieving zero-downtime migration with complete data integrity.
- Optimized recruiter dashboard load time from 2-3 seconds to under 500ms by introducing precomputed, indexed data pipelines, eliminating expensive runtime aggregations and enhancing user experience.

PROJECTS

CodeSM [React](#), [Node.js](#), [Express.js](#), [Redis](#), [BullMQ](#), [Docker](#), [PostgreSQL](#), [AWS EC2](#)

Personal Project

- Developed a scalable RCE (Remote Code Execution) engine by implementing segregated BullMQ queues and lightweight Redis payload caching, ensuring reliable high-throughput submissions with near-zero dropped jobs.
- Reduced per-test execution time from 300ms to 5ms (~98% faster) by switching to persistent Docker containers with tmpfs mounts, eliminating container spin-up overhead.
- Hardened job processing with a fault-tolerant worker architecture, incorporating a Dead Letter Queue for retries and a 1-hour Redis cache layer to significantly reduce database load during high-traffic spikes.

Storix [Next.js](#), [TypeScript](#), [FastAPI](#), [Celery](#), [Redis](#), [PostgreSQL](#), [AWS S3](#)

Personal Project

- Decoupled PDF ingestion from processing by introducing distributed Celery workers and a Redis task queue, enabling non-blocking long-running jobs without impacting API response times.
- Offloaded file transfer from the server by generating pre-signed S3 URLs for direct client uploads, eliminating backend bottlenecks and improving upload reliability.
- Implemented a Pub/Sub and WebSocket layer to push live task updates, replacing polling with real-time job status feedback from upload through delivery.

Chatterly [Next.js](#), [Socket.IO](#), [Redis](#), [PostgreSQL](#), [Prisma](#), [NextAuth](#)

Personal Project

- Enabled multi-instance chat functionality by wiring Redis Pub/Sub for cross-server event propagation, ensuring consistent room state across all nodes without requiring sticky sessions.
- Guaranteed zero message drops under concurrent multi-user load across distributed instances by isolating room traffic through dedicated Redis channel subscriptions.
- Protected private rooms by enforcing JWT verification and room-level authorization checks at the Socket.IO middleware layer, fully preventing unauthorized access.

EDUCATION

B.Tech in Computer Science and Engineering from Indian Institute of Information Technology Nov 2022 – May 2026 • Nagpur, Maharashtra
Nagpur
CGPA: 7.5 | Relevant Coursework: Operating Systems, Database Management Systems, Computer Networks, Object-Oriented Programming
