PROFESSIONAL SUMMARY

Highly motivated Software Developer Intern with a strong foundation in Python, JavaScript, TypeScript, React, and C++, eager to contribute to cutting-edge AI initiatives. Proven ability to design, develop, and deploy scalable, production-grade full-stack applications and optimize backend services. Possesses a deep understanding of software architecture, data pipelines, and AI/ML integration, with hands-on experience in evaluating and refining code for efficiency, scalability, and reliability. Adept at collaborating with cross-functional teams to enhance AI-driven coding solutions and build automated verification tools, aligning with Turing's mission to advance large language models.

SKILLS

Languages: Python, JavaScript, TypeScript, C++

Frameworks & Libraries: React, Node.js, Express.js, Next.js, FastAPI

Databases & ORMs: PostgreSQL, Redis, ClickHouse, Prisma, Drizzle

DevOps & Cloud: Docker, AWS (EC2, S3, Lambda), Nginx, Linux, Git, CI/CD

AI & ML: LLM integration, Prompt engineering, Semantic search, Pinecone

EXPERIENCE

Software Developer Intern at klimb.io

Nov 2025 – Current • Nagpur, Maharashtra

- Architected and implemented a credit-based monetization system for 6+ AI features using PostgreSQL and middleware, significantly reducing system complexity by 70% and enabling new revenue streams.
- Engineered a zero-downtime database migration to a shared global template architecture, restructuring the DB schema and backfilling data to ensure complete data integrity across all customers.
- Optimized recruiter dashboard performance by introducing precomputed, indexed data pipelines, slashing load times from 2-3 seconds to under 500ms, enhancing efficiency and user experience.

PROJECTS

CodeSM [React](#), [Node.js](#), [Express.js](#), [Redis](#), [BullMQ](#), [Docker](#), [PostgreSQL](#), [AWS EC2](#)

Personal Project

- Developed a scalable asynchronous code execution engine by implementing segregated BullMQ queues and lightweight Redis payload caching, enabling reliable high-throughput submissions with near-zero dropped jobs.
- Optimized code execution efficiency by switching to persistent Docker containers with tmpfs mounts, reducing per-test execution time by 98% (from 300ms to 5ms), enhancing system performance for benchmarking.
- Hardened job processing with a Dead Letter Queue for retries and a 1-hour Redis cache layer, significantly reducing database load during high-traffic spikes and improving fault tolerance.

Storix [Next.js](#), [TypeScript](#), [FastAPI](#), [Celery](#), [Redis](#), [PostgreSQL](#), [AWS S3](#)

Personal Project

- Designed and implemented an asynchronous PDF processing pipeline using distributed Celery workers and a Redis task queue, decoupling ingestion from processing to maintain non-blocking API response times.
- Offloaded file transfer from the backend by generating pre-signed S3 URLs for direct client uploads, eliminating server bottlenecks and improving upload reliability for large files.
- Integrated a Pub/Sub and WebSocket layer to push real-time task updates, providing users with instant feedback from file upload through delivery.

Chatterly [Next.js](#), [Socket.IO](#), [Redis](#), [PostgreSQL](#), [Prisma](#), [NextAuth](#)

Personal Project

- Enabled horizontally scalable messaging across multiple instances by wiring Redis Pub/Sub for cross-server event propagation, ensuring consistent room state without sticky sessions.
- Implemented zero-drop room event routing by subscribing each server to dedicated Redis channels, guaranteeing message delivery under concurrent multi-user loads across distributed instances.
- Secured private rooms by enforcing JWT verification and room-level authorization checks at the Socket.IO middleware layer, preventing unauthorized access.

EDUCATION

B.Tech in Computer Science and Engineering from Indian Institute of Information Technology Nov 2022 – May 2026 • Nagpur, Maharashtra
Nagpur
CGPA: 7.5 | Relevant Coursework: Operating Systems, Database Management Systems, Computer Networks, Object-Oriented Programming
