PROFESSIONAL SUMMARY

Highly motivated Software Engineer with a strong foundation in full-stack development, specializing in building and deploying scalable, production-grade software. Proficient in Python, JavaScript (including ReactJS), and C++, with practical experience in backend services, data pipelines, and integrating AI/LLM technologies. Adept at optimizing system performance, designing robust architectures, and ensuring code quality, eager to contribute to advancing large language models and AI-driven coding solutions.

SKILLS

Programming Languages: Python, JavaScript, TypeScript, C++

Frameworks & Libraries: React, Next.js, Node.js, Express.js, FastAPI

Databases & ORMs: PostgreSQL, Redis, ClickHouse, Prisma, Drizzle

DevOps & Cloud: Docker, AWS (EC2, S3, Lambda), Nginx, Linux, Git, CI/CD

AI & ML: LLM integration, Prompt engineering, Semantic search, Pinecone

EXPERIENCE

Software Developer Intern at klimb.io

Nov 2025 – Current • Nagpur, Maharashtra

- Engineered a credit-based monetization system for 6+ AI features, migrating platform access control from feature flags to PostgreSQL and middleware guards, significantly reducing system complexity by approximately 70%.
- Implemented a global field template architecture by restructuring the database schema, eliminating per-tenant data duplication and ensuring zero-downtime migration with complete data integrity across all customers.
- Optimized recruiter dashboard performance by introducing precomputed, indexed data pipelines, reducing load times from 2-3 seconds to under 500ms.

PROJECTS

CodeSM *React, Node.js, Express.js, Redis, BullMQ, Docker, PostgreSQL, AWS EC2*

Personal Project

- Developed a scalable, asynchronous code execution engine by implementing segregated BullMQ queues and lightweight Redis payload caching, enabling reliable high-throughput submissions with near-zero dropped jobs.
- Eliminated container spin-up overhead by switching to persistent Docker containers with tmpfs mounts, reducing per-test execution time from 300ms to 5ms (approximately 98% faster).
- Hardened job processing with a Dead Letter Queue for retries and a 1-hour Redis cache layer, significantly reducing database load during high-traffic spikes.

Storix *Next.js, TypeScript, FastAPI, Celery, Redis, PostgreSQL, AWS S3*

Personal Project

- Engineered an asynchronous PDF processing pipeline with distributed Celery workers and a Redis task queue, enabling non-blocking long-running jobs with no impact on API response times.
- Offloaded file transfer from the server by generating pre-signed S3 URLs for direct client uploads, eliminating backend bottlenecks and improving upload reliability.
- Implemented a Pub/Sub and WebSocket layer to push real-time task updates, providing users with instant feedback from upload through delivery.

Chatterly *Next.js, Socket.IO, Redis, PostgreSQL, Prisma, NextAuth*

Personal Project

- Implemented horizontally scalable messaging architecture using Redis Pub/Sub for cross-server event propagation, ensuring consistent room state across distributed instances without sticky sessions.
- Designed zero-drop room event routing by subscribing each server to dedicated Redis channels, guaranteeing message delivery under concurrent multi-user load across distributed instances.
- Secured private rooms by enforcing JWT verification and room-level authorization checks at the Socket.IO middleware layer, preventing unauthorized access.

EDUCATION

B.Tech in Computer Science and Engineering from Indian Institute of Information Technology Nagpur Nov 2022 – May 2026 • Nagpur, Maharashtra

CGPA: 7.5 | Relevant Coursework: Operating Systems, Database Management Systems, Computer Networks, Object-Oriented Programming
